

TAiMA Ventum

The new lightweight rollator TAiMA Ventum is the perfect combination of functionality, safety and customisable design. It represents the exclusive segment of the TAiMA range, which has been successful for years.

Mix & Match.

The Mix & Match function allows you to mix and match the colours of the frame and backrest and the colours and shapes of the bags to create your very own personalised configuration.

TAiMA Ventum for your safety and comfort.

- Continuously height-adjustable push handles [1]
- Ergonomically shaped brake handles [1] together with the concave brake blocks allow the brakes to be applied with little effort [2]
- Soft and non-slip material of the comfortable hand grips helps with adopting an ergonomic hand position when moving about [1]
- Smooth-running soft wheels make manoeuvring easier, even on somewhat uneven walking surfaces [2]
- A drawstring in the seat makes it easy to fold up the rollator with one hand. [3]. A safety bar stabilises the rollator when folded up [4]
- Fidlock magnet system allows the bag to be attached and detached with a single movement [5]
- Recesses in the seat cover secure the optional tray on which food and small objects can be transported comfortably and safely [6]
